Making Theoretical Progress:
National Support for Treating Obesity

2013: AMA Recognizes Obesity as a Disease and...

2014: AMA “supports patient access to the full continuum of care of evidence-based obesity treatment modalities such as behavioral, pharmaceutical, psychosocial, nutritional, and surgical interventions” and...

2017: AMA “encourages the use of person-first language and discourage the use of stigmatizing terms including obese, morbidly obese, and fat; and (3) will educate health care providers on the importance of person-first language for treating patients with obesity; equipping their health care facilities with proper sized furniture, medical equipment and gowns for patients with obesity; and having patients weighed respectfully” and...

2018: AMA “will work with state and specialty societies to identify states in which physicians are restricted from providing the current standard of care with regards to obesity treatment; and (b) work with interested state medical societies and other stakeholders to remove out-of-date restrictions.”
**Making Theoretical Progress:**

**National Support for Treating Obesity**

---

**Office of Personnel Management**

2014: Federal Office of Personnel Management (OPM) issues specific guidance to both Multi-State Health Plans and Federal Employee Health Benefit Program carriers regarding obesity treatment services – stating that the agency will no longer tolerate plans excluding obesity treatment coverage on the basis that obesity is a "lifestyle" condition or that treatment is "cosmetic." If plans choose to continue to exclude coverage for these services, plans must provide a clinical rationale for non-coverage.

---

**National Council of Insurance Legislators**

2015: National Council of Insurance Legislators (NCOIL) adopted policy – “encouraging states to update their state employee, state Medicaid and state health exchange plans to improve access to, and coverage of the entire range of treatment options for wellness and preventive policies, including treatments for obesity such as pharmacotherapy and bariatric surgery.”

---

**National Lieutenant Governors Association**

2018: National Lieutenant Governors Association (NLGA) approved policy to help: reduce obesity stigma; establish statewide obesity councils and taskforces; support additional training for current and future healthcare professionals; and support access to obesity treatment options for state employees and in other publicly funded healthcare programs.
Softening/Eliminating Pre-Op Medical Weight Loss Requirements

Cigna: A statement from a physician/physician’s assistant/nurse practitioner/registered dietician (i.e., other than the requesting surgeon) that the individual has failed previous attempts to achieve and maintain weight loss by medical management.

Emblem Health: Removed pre-surgical dieting prerequisite and statement that member must not have a life-threatening condition

Health Care Services Corporation (BCBS of Illinois, Texas, Montana, New Mexico, Oklahoma): HCSC is changing its Bariatric Surgery Medical Policy no. SURG716.003 effective February 1, 2019 to eliminate any formal requirement that patients engage in supervised weight loss for a particular time frame (e.g. 3, 6, 12 months, etc.) prior to surgery.

Expanding coverage for Metabolic Surgery

Dean Health – BMI of 30.1 – 34.9 with Type 2 diabetes mellitus and inadequately controlled hyperglycemia, as demonstrated by an inability to maintain a hemoglobin A1c below 8% despite optimal medical treatment such as oral medication and/or insulin).
FDA Drug Review & Approval Process

Obesity professionals, patients, and GWU School of Public Health facilitated a nine-month consensus process back in 2011 where FDA was an active observer. FDA was encouraged to evaluate both risks and benefits of new obesity treatments and refocus on obesity care, not simply weight loss.

United States Pharmacopeia New Drug Class for Obesity Drugs

USP-DC — an independent drug classification system, which USP designed to address stakeholder needs emerging from the extended use of the USP Medicare Model Guidelines beyond the Medicare Program. The obesity community requested and was extremely pleased that the final version of the USP-DC included a new class for anti-obesity agents as well as recognition of new combination agents.
OCAN Study of 2017 State Health Exchange Benchmark Plans
24 states (AK, AR, CO, DE, FL, HI, IA, ID, KS, KY, LA, ME, MS, MT, NE, NJ, NV, NY, OR, SC, SD, WI, WV and WY) exclude coverage for weight/obesity management services and made NO MENTION of obesity screening and counseling services under the USPSTF covered preventive services section of the document.

Bipartisan Policy Center’s My Healthy Weight Pledge
• At least 12 visits for adults with a BMI ≥ 30
• At least 6 contact hours for adults with a BMI ≥ 25 and one or more risk factors for cardiovascular disease
• At least 12 visits for children ages 3 years or older with a BMI ≥ 95th percentile
• At least 8 visits for children ages 3 years or older with a BMI 85th – 95th percentile
• Members will implement and/or cover one or more community-based program(s) for adults and/or children

State of Alaska Department of Health and Social Services, Blue Cross and Blue Shield of Kansas City
Blue Cross and Blue Shield of North Carolina, Blue Shield of California, Capital District Physicians’ Health Plan
Connecticut Department of Social Services, Delaware Division of Medicaid and Medical Assistance, Nestlé,
Novo Nordisk Inc., South Carolina Department of Health and Human Services, Texas Health Aetna
