Antimicrobial Stewardship

- **How critical are stewardship programs in reducing the use of antimicrobials in healthcare settings?**
 - **What are the potential economic losses for not having these in place?**
- **What are the pathways to effective guidance for reducing the use of antimicrobials in healthcare settings**
 - **e.g., outpatient, ambulatory care, clinic, etc.?**
- **What kinds of stewardship programs that aim to reduce inappropriate use of antimicrobials in these settings have succeeded and failed, and what kinds of considerations need to be made to ensure that these programs are effective and sustainable?**

What is Antimicrobial Stewardship?

- Antimicrobial stewardship involves the optimal selection, dose and duration of an antibiotic resulting in the cure or prevention of infection with minimal unintended consequences to the patient including emergence of resistance, adverse drug events, and cost

Ultimate goal is improved patient care and healthcare outcomes

Nationwide Survey on Antimicrobial Stewardship Program Characteristics

- 8,000 nationwide providers surveyed (5% response rate)
 - Pharmacy directors
 - ID pharmacists
- 51% had formal ASP
- 63% of non-ASP institutions considered implementing a program
 - Common barriers:
 - Staffing constraints
 - Funding constraints
- Institutions with ASPs more likely to have:
 - More admissions
 - Antibigrams
 - ID consult services
 - ID fellowship programs

Institutions with ASPs: National Survey Results

- Education techniques:
 - Newsletter (56.8%)
 - Grand Rounds (45.9%)
 - Conferences (41.5%)
 - None (6%)
- Stewardship techniques:
 - IV to PO conversion (85.3%)
 - Guidelines and clinical pathways (81.5%)
 - Dose optimization (70.7%)
 - Streamlining/de-escalation (62.5%)
 - Closed formularies (59.8%)
 - Antimicrobial order forms (41.8%)
 - Antimicrobial cycling (3.3%)
- Restriction Methods:
 - “Back end” approach (52.5%)
 - Automatic stop orders (45.9%)
 - ID consult required (44.3%)
 - “Front end” approach (39.3%)
 - None (0%)
- Commonly restricted antimicrobials
 - Antifungals (72.7%)
 - Linezolid (70.5%)
 - Carbapenems (69.9%)
 - Daptomycin (69.4%)
 - Tigecycline (64.5%)
 - Anti-Pseudomonals (57.4%)
 - Fluroquinolones (44.8%)
 - None (0%)

Antimicrobial Stewardship at TMC

14+ Years and Going Strong

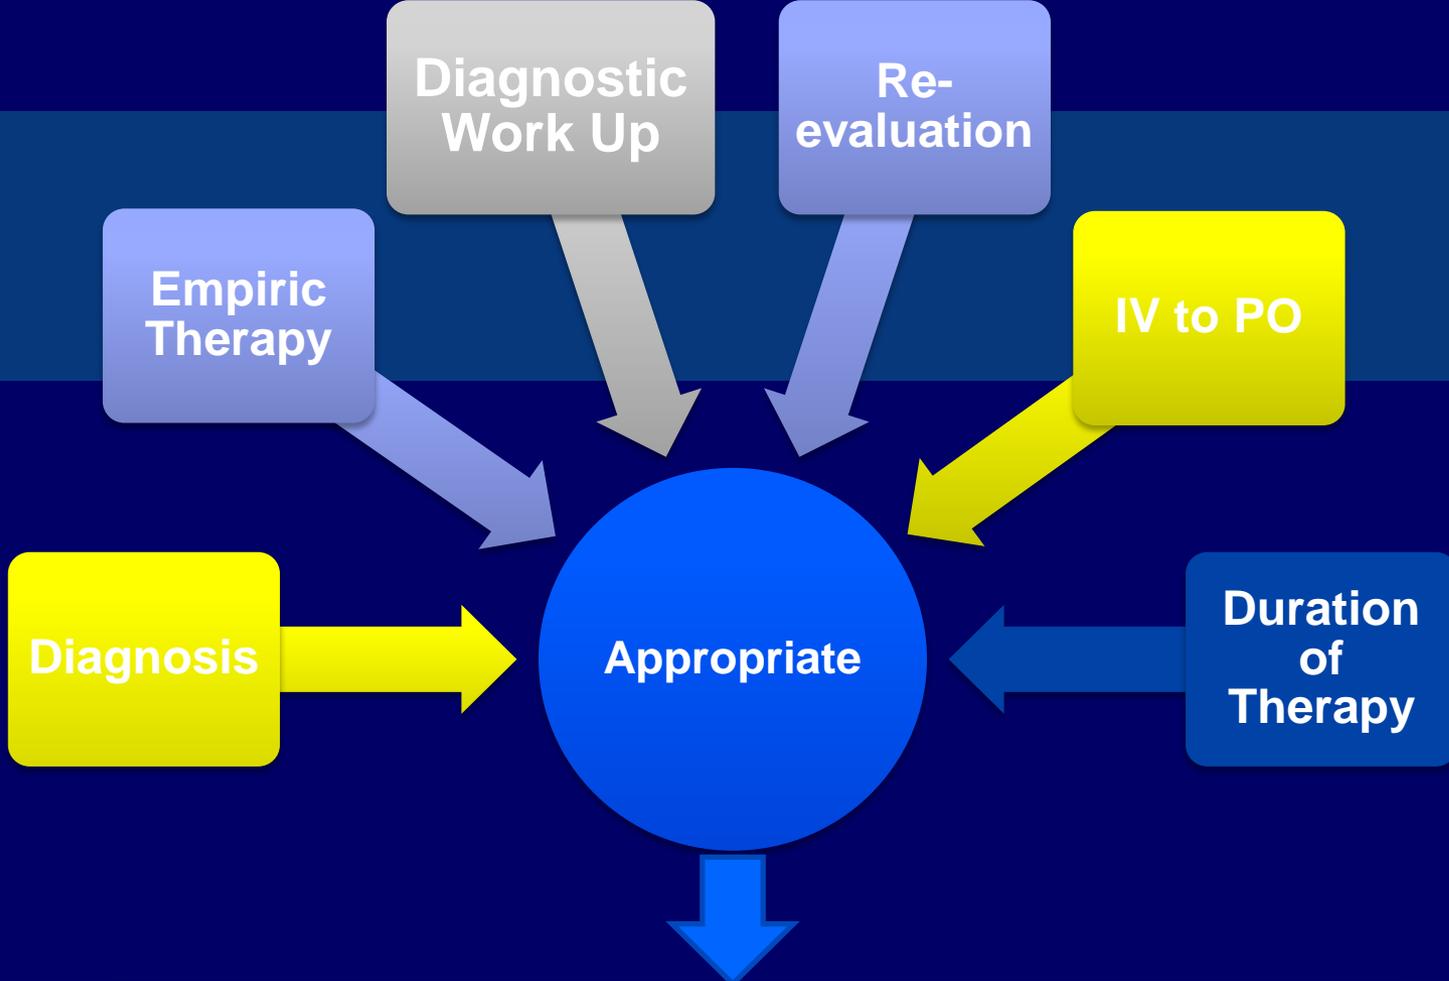

- Improve patient outcomes
- Slow antimicrobial resistance
- Ensure appropriate empirical antimicrobial therapy
 - Antimicrobial choice, dosage, route, and duration
- Educate prescribers on the importance of prudent antimicrobial prescribing
- Reduce medication errors related to antimicrobials
- Reduce cost
 - Duration of treatment
 - IV to PO
 - De-escalation and stopping unneeded treatment
- 2 part-time ID physicians, 1 full time ID PharmD

Antimicrobial Stewardship Strategies at Tufts Medical Center

- Prospective audit with intervention and feedback
- Formulary restriction and preauthorization (dedicated pager)

Supplemental Strategies

- Education: “AMT Question of the Week”
- Guidelines and disease management: “Red Book”
- Dose optimization via PK-PD:
 - extended dosing of Pip-Tazo
- De-escalation/Streamlining
- Antimicrobial order forms/order sets in CPOE
- IV-PO switch: automated by pharmacy
- Computerized decision support
 - Senti7 and Safety Surveillor

IMPROVED OUTCOMES	
Mortality	Relapse / Readmission
Length of stay	Resistance rates
Adverse Drug Events	<i>C. difficile infection</i>

Improving antibiotic use saves money

- **“Comprehensive programs have consistently demonstrated a decrease in antimicrobial use with annual savings of \$200,000 - \$900,000”**
 - **Larger academic hospitals and smaller community hospitals**
- **At Tufts Medical Center we estimate the total cost savings to be ~ \$400,000 per year**
 - **Over life of program over \$ 5.6 million saved**

Dellit et al. CID 2007; 44 (2): 159-177

Impact of Antibiotic Stewardship Program Intervention on Costs

Setting	Intervention	Impact/Savings
Academic Medical Center	AMT	\$3MM/3 years
Municipal Hospital	Restriction of cephalexin	29% abx cost reduction
Academic Medical Center	Preset order forms	Non-recommended dosing: 60-90% to 6%, \$76,000 annual drug cost savings
VA Hospitals	IV to oral conversion (quinolones)	\$4 million/4 years
Academic Medical Center	Batching iv abx	\$250,000/year
Academic Medical Center	AMT	> \$900,000/year

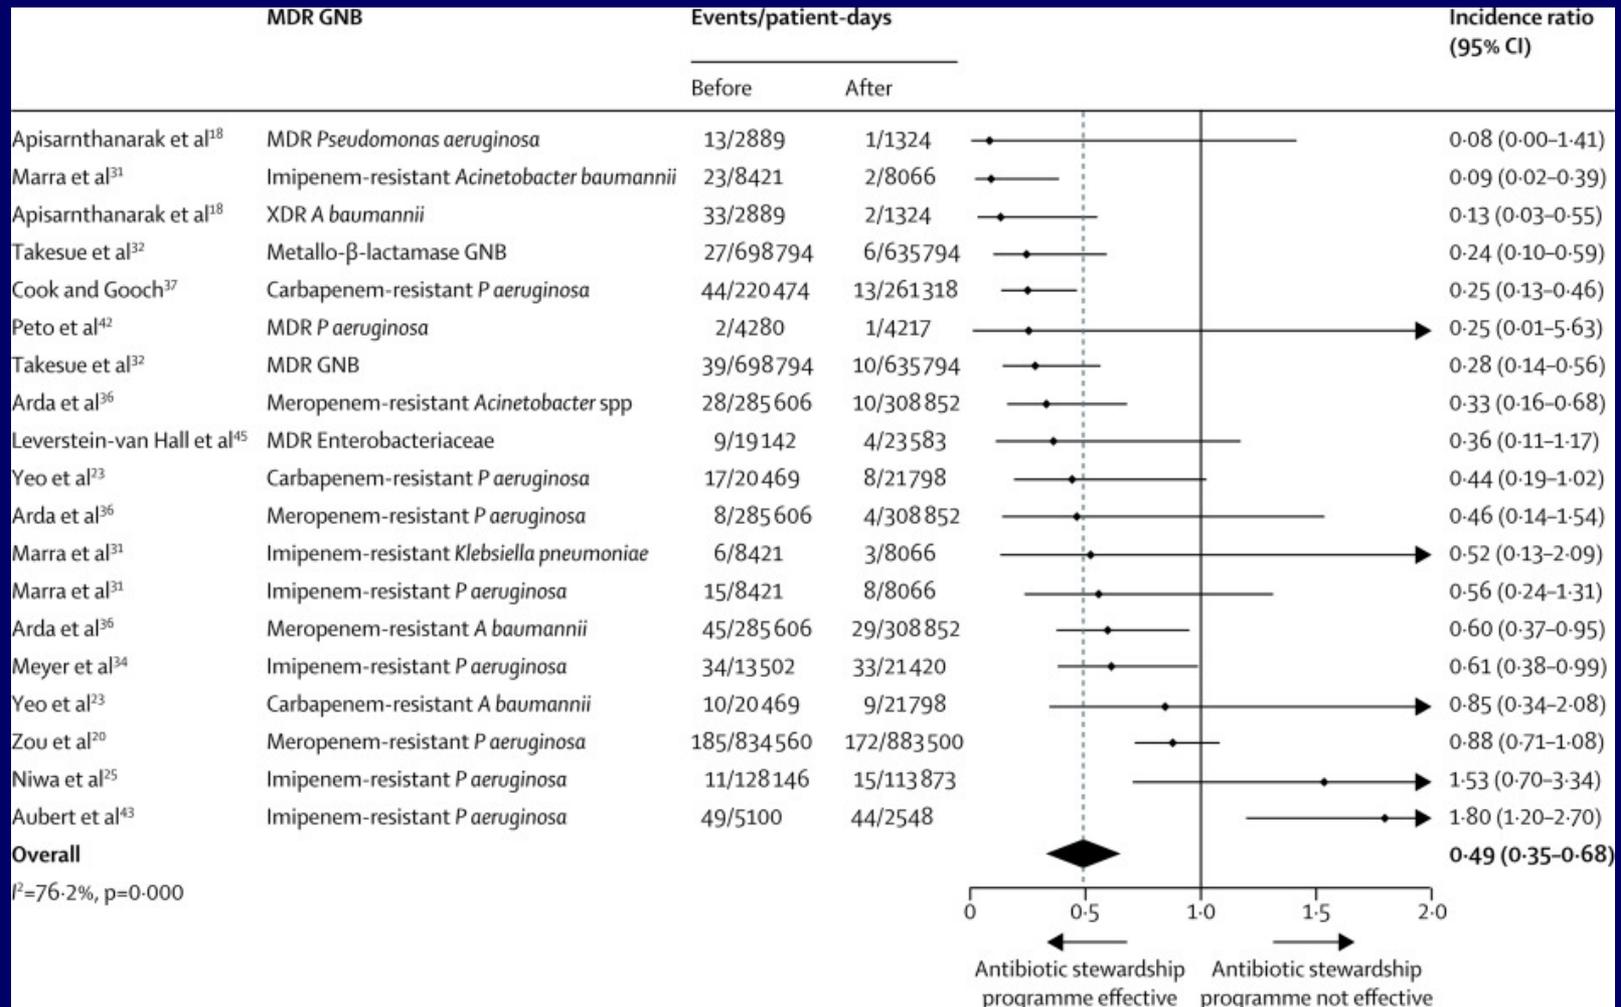

Issues: Measurements, definitions

American Journal of Medicine. 1981, 71: 941-944; Archives of Internal Medicine 1988; 148: 1720; Jones et al. ICHE 2012; 33: 362; Bantar, C. et al. Clin Infect Dis 37, 180-6 (2003)

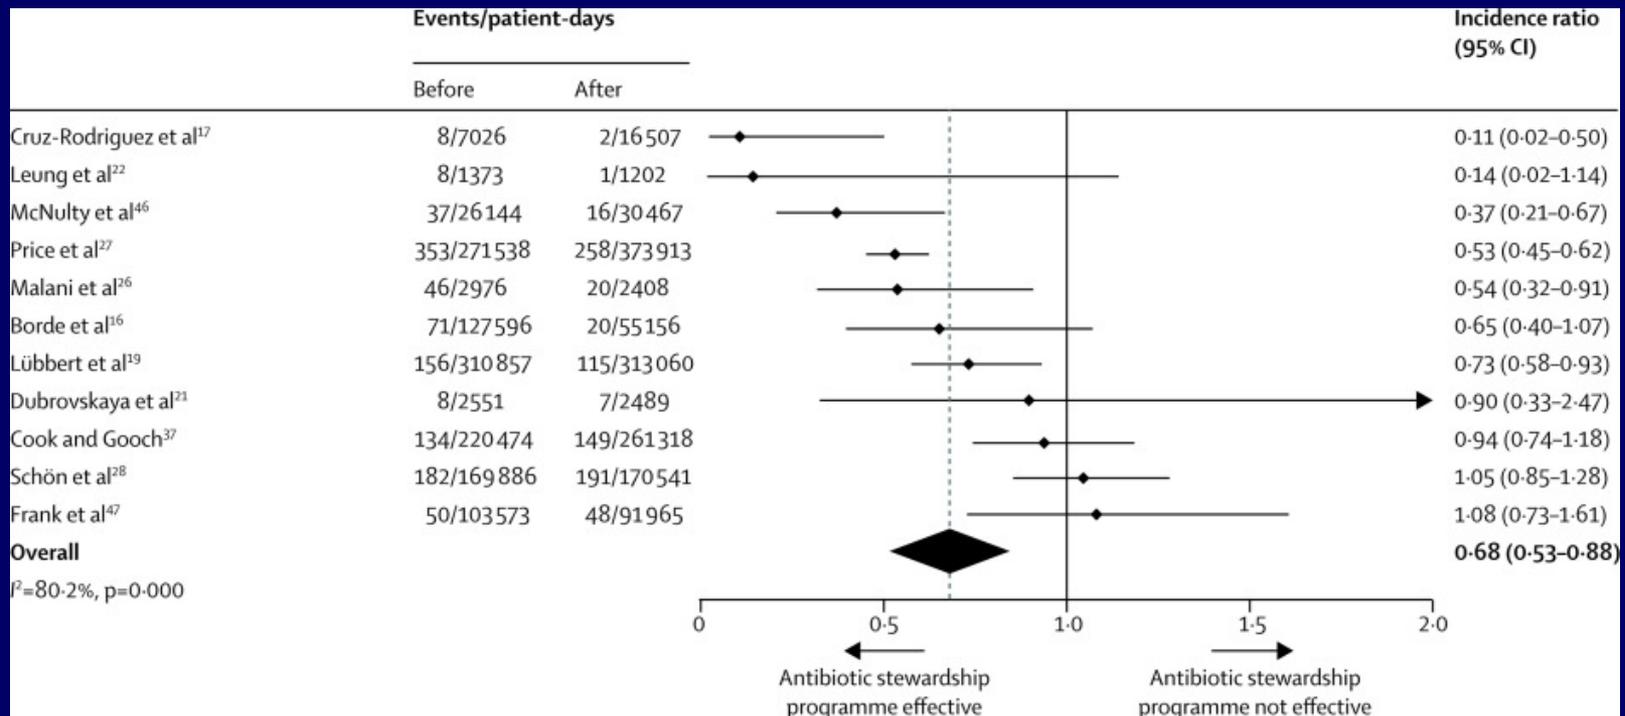

Impact of Antibiotic Stewardship Program Intervention on Other Costs

- Infection and colonization with antibiotic-resistant bacteria, *C. difficile* infection all decreased with antibiotic stewardship
 - Meta analysis
- Adverse Drug Events (ADE)
 - 20% hospitalized patients who receive > 24 hrs abx developed an abx-associated ADE
 - 20% of ADEs attributable to abx prescribed for conditions for which abx not indicated
 - Every 10 days of therapy conferred 3% additional risk of ADE

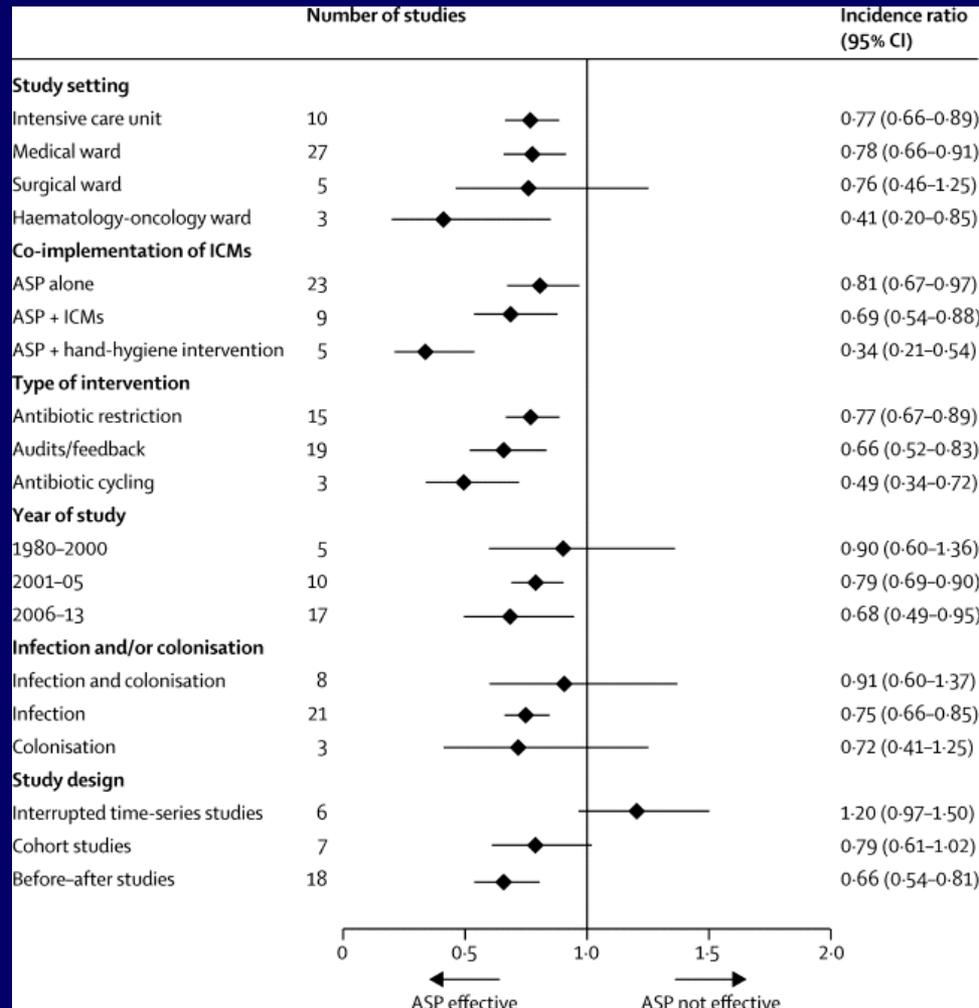

Effect of Antibiotic Stewardship on Incidence of MDR GNB

Effect of Antibiotic Stewardship on Incidence of *C. difficile* Infections

Effect of Antibiotic Stewardship on Antibiotic Resistance

Joint Commission
Requirement

Official Publication of Joint Commission Requirements
New Antimicrobial Stewardship Standard

APPLICABLE TO HOSPITALS AND CRITICAL ACCESS HOSPITALS

Effective January 1, 2017

Medication Management (MM)

Standard MM.09.01.01

The [critical access] hospital has an antimicrobial stewardship program based on current scientific literature.

Elements of Performance for MM.09.01.01

- Leaders establish antimicrobial stewardship as an organizational priority. (See also LD.01.03.01, EP 5)
Note: Examples of leadership commitment to an antimicrobial stewardship program are as follows:
 - Accountability documents
 - Budget plans
- The [critical access] hospital educates staff and licensed independent practitioners involved in antimicrobial ordering, dispensing, administration, and monitoring about antimicrobial resistance and antimicrobial stewardship practices. Education occurs upon hire or granting of initial privileges and periodically thereafter, based on organizational need.
- The [critical access] hospital educates patients, and their families as needed, regarding the appropriate use of antimicrobial medications, including antibiotics. (For more information on patient education, refer to Stan-

Core Elements of Hospital Antibiotic Stewardship Programs

- **Leadership Commitment:**
 - Dedicating necessary human, financial and information technology resources
- **Accountability:**
 - Appointing a single leader responsible for program outcomes
 - Experience with successful programs show that a physician leader is effective
- **Drug Expertise:**
 - Appointing a single pharmacist leader responsible for working to improve antibiotic use

Core Elements of Hospital Antibiotic Stewardship Programs

- **Action:**
 - Implementing at least one recommended action, such as systemic evaluation of ongoing treatment need after a set period of initial treatment (i.e. “antibiotic time out” after 48 hours)
- **Tracking:**
 - Monitoring antibiotic prescribing and resistance patterns
- **Reporting:**
 - Regular reporting information on antibiotic use and resistance to doctors, nurses and relevant staff
- **Education:**
 - Educating clinicians about resistance and optimal prescribing

Antibiotic Stewardship Recommendations PACCARB - A One Health Approach

- **Implement efforts to promote adoption of antibiotic stewardship in curricula by faculty in colleges of human and veterinary medicine**
- **Promote a culture of antibiotic stewardship as an integral part of continuing education and clinical practice for practicing providers and professionals**
 - **Physicians, physician assistants, nurses, nurse practitioners, dentists, pharmacists, health care administrators, and others**

PACCARB

Antibiotic Stewardship Recommendations

- **Ensure development of evidence-based ASPs that are positioned to drive change**
- **Enlarge and train the ID physician and pharmacist AS workforce**
- **Enhance collaboration between CMS Quality Improvement Networks and Hospital Engagement Networks and CDC State HAI/AR Prevention Programs**
- **Increase attention to AS in outpatient settings**
- **Investigate which educational messages are the most likely to induce behavior change among prescribers and consumers; identify appropriate groups and messengers to deliver the messages**
- **Ensure sustained funding**

Continued...

- **CDC NHSN survey on national uptake of ASPs**
- **CDC funding to build core HAI/AR detection and response infrastructure in every state and support State HAI/AR Prevention Programs in up to 25 states**
- **Continued refinement of CDC NHSN AUR module to collect risk adjusted antibiotic use data**
- **AHRQ implementation guide for AS in LTCFs**
- **Active implementation of ASPs in DoD and VA facilities**
- **Expanded funding to CDC, AHRQ, and NIH for research in development and implementation of interventions to address drivers of the emergence and spread of antibiotic resistance and misuse of antibiotics**

Research Recommendations

- **Fund research on the most effective approaches to perform antibiotic stewardship, to influence and to predict prescriber behavior, and to prevent the spread of antibiotic resistance in acute care, long-term care, and ambulatory settings**
- **Translate the knowledge gained from research into tools for broad use**
- **Develop a pipeline of research in this area through funding of investigators to promote a career track in AS/AR activities**
