

Training in Population Health Science: Undergraduates

Samuel Preston
University of Pennsylvania
Population Studies Center

IOM Roundtable on Population Health
Washington, D.C.

June 1, 2015

Sources of Undergraduate Interest in Health

Humanitarian concerns: poor countries, inequality in US

Impact of huge health care industry

High proportion of pre-meds

Increased popularity of interdisciplinary programs

Concern with self as affected by mental and physical health

Frequency of Appearance of “Health” and “Income” in Books since 1900

Goals of the Health and Societies Major

- read scientific and medical texts critically, and assess their social, cultural, and political origins and ramifications;
- identify and define key social determinants of health in a variety of historical and contemporary contexts;
- analyze the interplay of factors that have resulted in particular health outcomes and policies;
- integrate methods from history, sociology, anthropology, and other disciplines in empirical assessments of communities, populations, and policy interventions on multiple levels;
- pursue in-depth research projects using published sources, archival material, and ethnographic and experimental data;
- analyze data using both quantitative and qualitative methods; and
- participate in the design of effective multipronged strategies to address health challenges in local, national, and international contexts.

The Health of Populations

Basic premise: health outcomes are measurable

Develop some of the basic measures

From Vital Signs: Core Metrics for Health and Health Care Progress (IOM 2015):

“Life expectancy- measure for a validated health concept that reflects overall system performance with respect to a wide range of factors influencing health.”

The Health of Populations

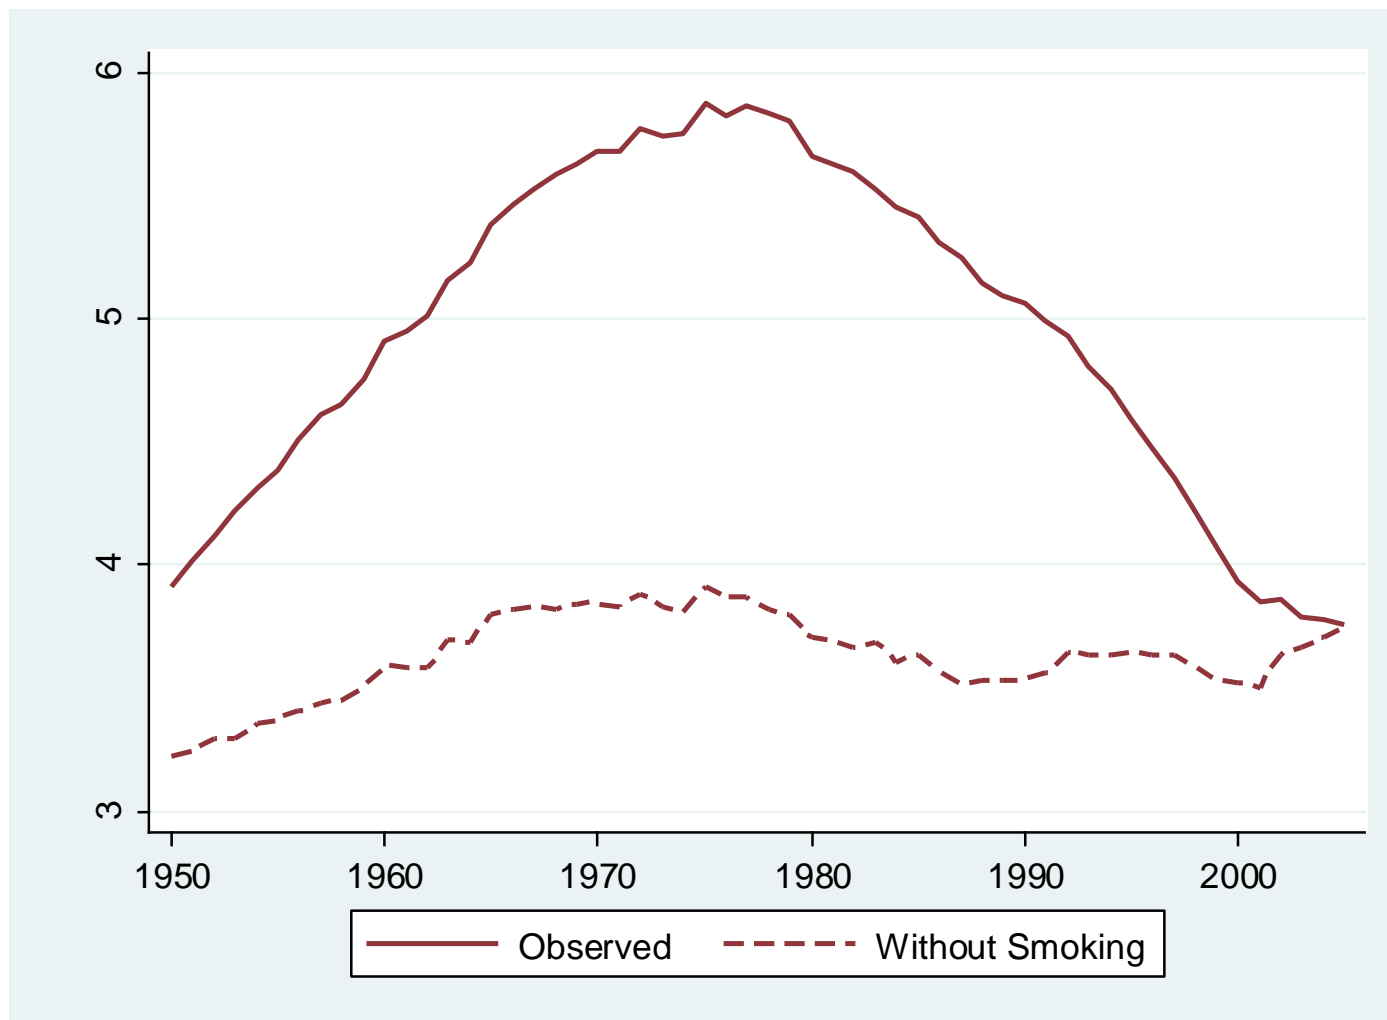

The fundamental question: What causes health measures to vary

- Over time
- Over space (nations, states)
- Across social groups
- Across sex

Linked to the major determinants

- Economic performance
- Medical and public health technology
- Public policy and administration
- Health behaviors

FIGURE 2 U.S. trends in the observed sex difference in e_{50} and the estimated sex difference without smoking.

Goals of the Course

Develop analytic frame

Make clear the value and importance of health

Develop specific skills

- standardization
- life table
- population attributable fraction
- cost-effectiveness calculations
- measures of inequality
- DALY's

Identify and foster budding researchers

“I remember reading the 1993 World Development Report [on health]. Every page screamed out that human life was not being as valued in the world at large as it should be. My wife Melinda and I were stunned to learn that 11 million children die every year from preventable causes. This is when we decided to make improving health the focus of our philanthropy.”

- Bill Gates, 2003

Goals of the Course

Develop analytic frame

Make clear the value and importance of health

Develop specific skills

- standardization
- life table
- population attributable fraction
- cost-effectiveness calculations
- measures of inequality
- DALY's

Identify and foster budding researchers

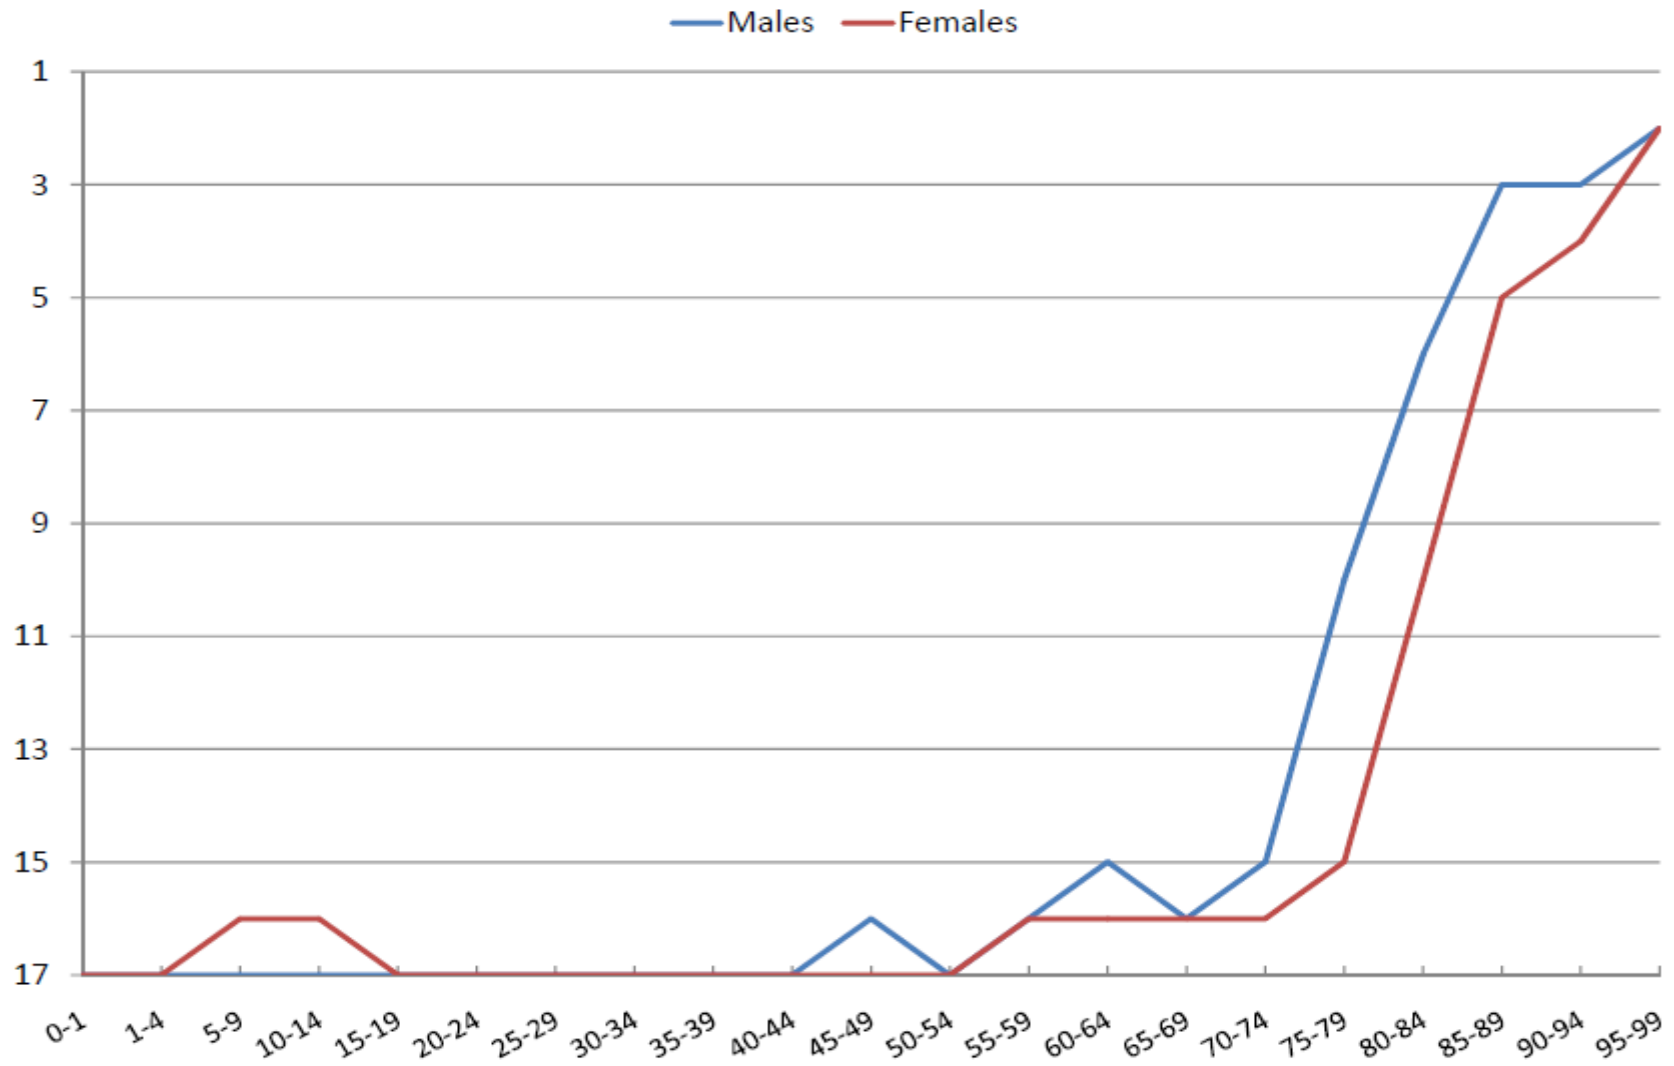

Undergraduates Into Researchers:

“Mortality of American Troops in the Iraq War”

Emily Buzzell and S.H.Preston. Population and Development Review. Vol. 33(3). September, 2007: 555-566.

Jessica Ho, “Mortality Under Age 50 Accounts for Much of the Fact that US Life Expectancy Lags That of Other Countries” Health Affairs. Vol. 32(3). 2013: 59-67.

Ranking of US Death Rates Among 17 Countries, 2006-2008

Addition to List of “Competencies” in Population Health?

“Familiarity with basic measures that characterize population health”

- acknowledges that health is quantifiable
- creates a useful lexicon
- provides valuable lens
- provides focus for the field
