

# Regenerative Engineering for Lupus and Uterine Fibroids

*Erika Moore, PhD*

Fischell Department of Bioengineering

University of Maryland, College Park

The Intersection of Regenerative Medicine  
and Women's Health: A Workshop  
Oct. 2024

Disclosures: None

# Innovations to advance translational research

- Conditions observed in the clinic are sometimes challenging to analyze on a single cell or in vivo context
  - Challenge of animal models
- Development of microphysiological systems which enable context of the microenvironment to be considered

## **Mission of the Lab:**

Engineering biomaterial models to leverage the regenerative potential of the immune system across health inequities

## **Vision of the Lab:**

Developing compassionate innovators equipped to transform biomedical research

# Leveraging regenerative medicine to address limitations in fundamental knowledge

Myeloid Function in Aging

Myeloid Function in Lupus

Myeloid Attenuation + ECM

Myeloids in Uterine  
Fibroids

# Preclinical Model of Monocyte Influence on Vascular Plexus in Lupus

## Myeloid Function in Lupus

# Females make up 90% of SLE patients

U.S. Population

SLE Patients in U.S.

■ Male  
■ Female

# African American women disproportionately suffer from SLE

U.S. Population

SLE Patients in U.S.

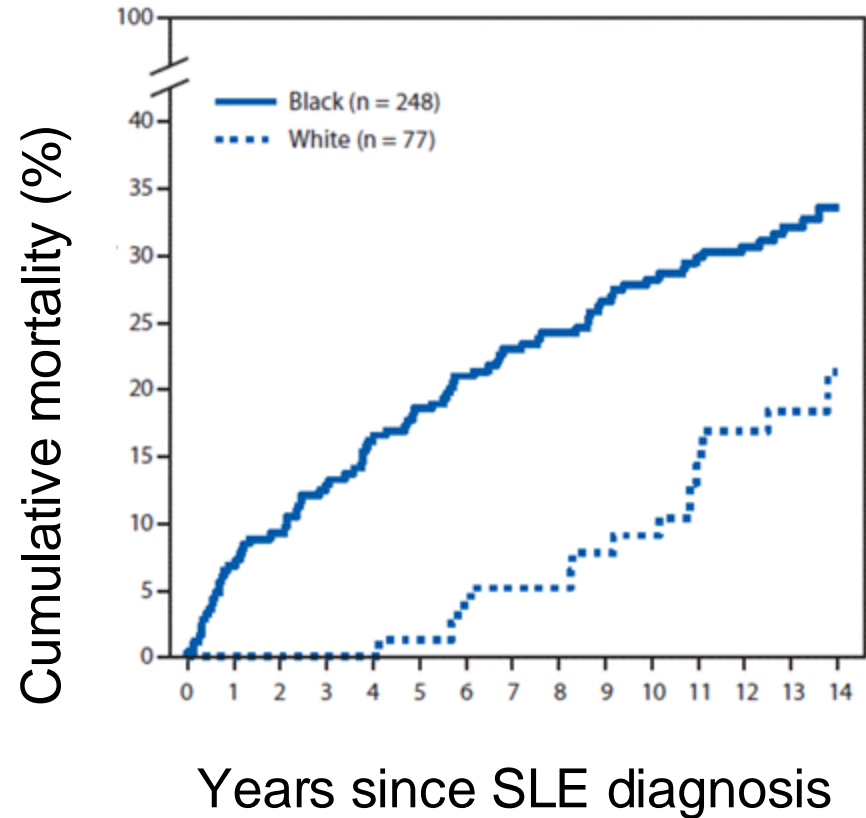

Lim et al. MMWR Morb Mortal Wkly Rep (2019); Fujimura, Soc Stud Sci (2011); Chou, Sci News (2017)

# SLE mortality is higher in patients of African ancestry

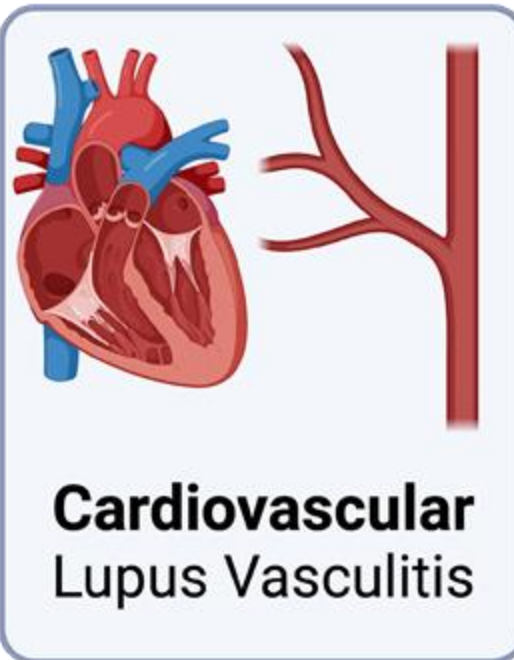

- Diagnosed earlier in life
- More severe course of disease
- More likely to die at a younger age

# Lupus Vasculitis (LV): A common complication of SLE

LV is defined as SLE associated **inflammation of vasculature**

LV can result in other types of cardiovascular disease

LV can damage other tissues/organ systems

LV can affect small, medium, or large vessels

Image created with Biorender.com

# Role of Monocytes in SLE

Dema B, *Antibodies* (2016); Dörner T, *Lancet* (2019); Tian J, *ARD* (2023); Lim S, *Morb. Mortal. Wkly. Rep.* (2019); Izmirly PM, *A&R* (2021) Li Y, *Arch Immunol Ther Exp* (2010)

# Employ Microphysiological Platforms to Characterize Monocytes from SLE Patients

**Specific effects of alterations in monocytes from SLE patients remain understudied**

**Question 1**

Is monocyte expression of genes and cell markers altered in SLE patients?

Polarization states and gene expression

**Question 2**

Do monocytes from SLE patients alter microvessel connectivity in 3D vessel formation assay?

*In vitro* effects of monocytes on segment connectivity

# Microphysiological systems to study diseases

PEG- poly(ethylene glycol)  
RDGS/PQ- ECM derived peptides

# Our microphysiological platforms can replicate immune cell functions

Close Alignment

Bridging

Z= 2  $\mu\text{m}$

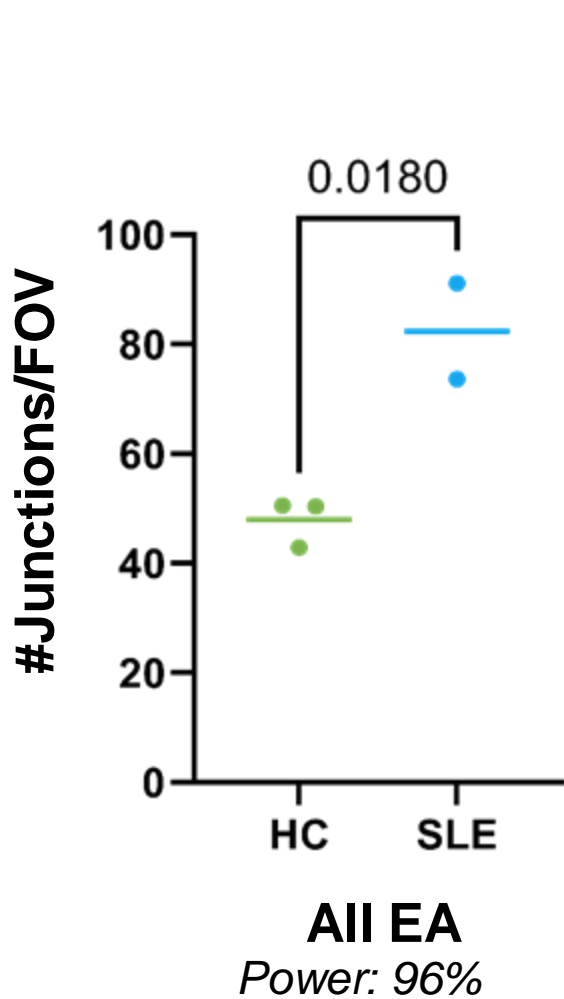

Z= 4  $\mu\text{m}$

Z= 6  $\mu\text{m}$

# SLE increases the number of junctions and endpoints of endothelial segments

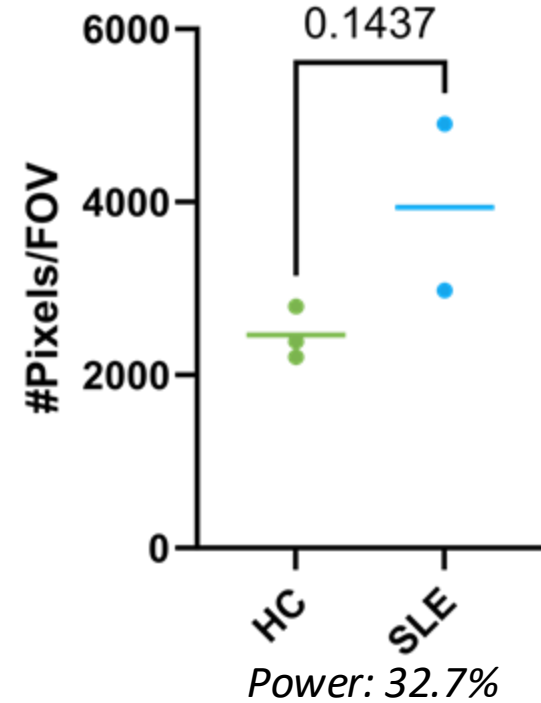

Scale bars = 50  $\mu$ m

# Monocytes from SLE Patients Affect Metrics Related to Branching

Developed a preclinical model to assess SLE myeloid cell influence on microvessel structure

SLE increases the number of junctions and endpoints of microvessel segments

# Translating impact for personalized profiling

Collect 40 mL  
peripheral  
blood

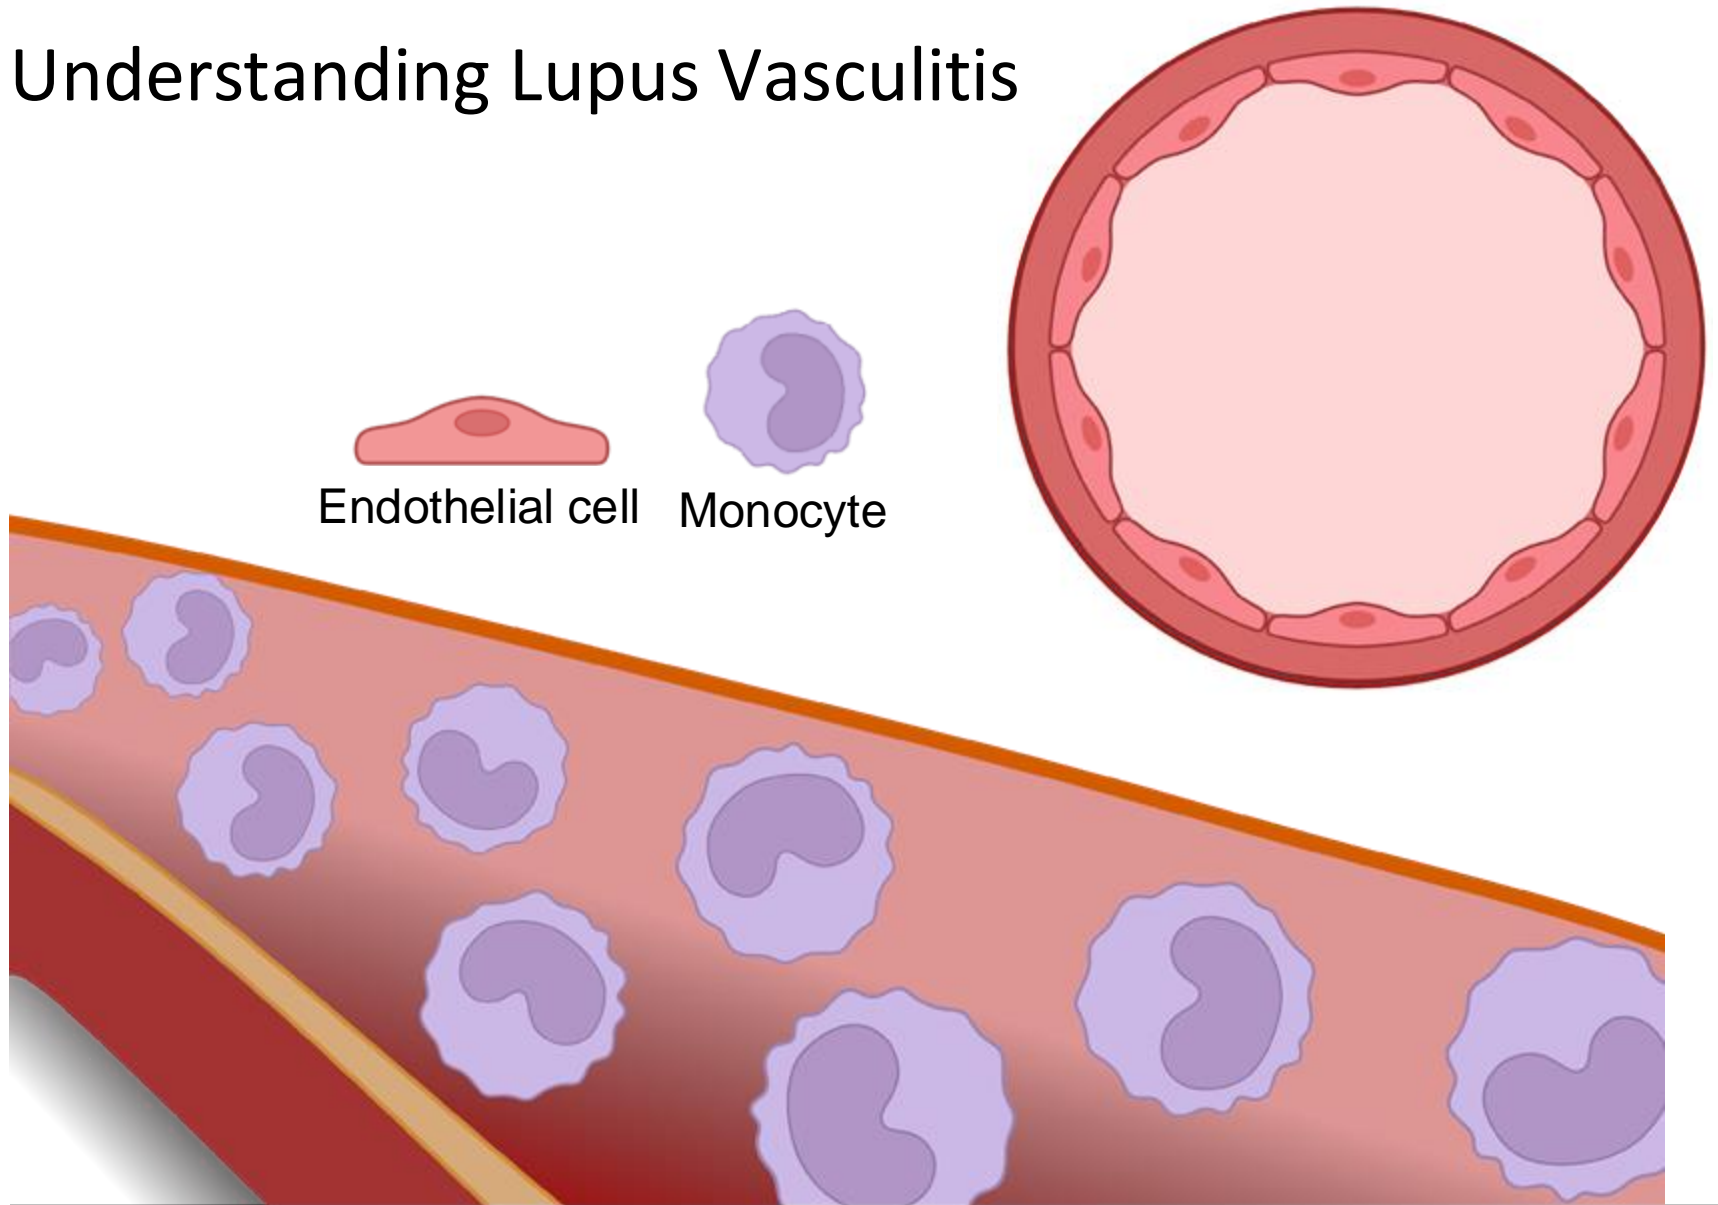

Peripheral blood  
mononuclear  
cells

Negative magnetic  
isolation of monocytes

Partnership with JHU Lupus Center, Dr. Michelle Petri

# Understanding Lupus Vasculitis

# Understanding Lupus Vasculitis

Endothelial cell    Monocyte

# What causes Lupus Vasculitis?

There are limited in vitro models of  
Lupus Vasculitis

# Introduce a microfluidic device to observe monocyte-endothelial cell interactions

Monocytes

Endothelial Cell

Hydrogel

Dr. Evangelia Bellas

# Assessing monocyte behavior with endothelial cells as a function of disease state

Development of a microfluidic system  
to assess SLE myeloid cell  
endothelial cell function

Dr. Evangelia Bellas

# Understanding uterine fibroid growth through regenerative medicine tools

Uterine Fibroids

**Uterine fibroids are the most common gynecological tumor and arise in the myometrium.**

Al-Hendy A, et al. (2017) Semin Reprod. Day Baird D, et al.(2003) Am J Obs Gynecol. Drayer S, et al. (2015). J Gyn & Obst. De La Cruz MS. (2017) Am Fam Phys. Madueke-Laveaux OS, et al. (2021). J Clin Med.

# What is known about uterine fibroids?

- Fibroids (L) are 2-3 x stiffer than myometrial (M) tissue

Rogers R, et al. (2008). Am J of Obstetrics and Gynecology.

# What is known about uterine fibroids?

- Fibroids are 2-3 x stiffer than myometrial tissue
- TGF- $\beta$ 3 is up to 5x higher in fibroids than myometrium

Arici, et al. *Reproductive Bio* (2000).

# What is known about uterine fibroids?

- Fibroids are 2-3 x stiffer than myometrial tissue
- TGF- $\beta$ 3 is up to 5x higher in fibroids than myometrium
- Macrophages are higher in density in fibroids compared to distant healthy tissue

Modified from Protic O, et al. (2016). Cell and Tissue Res.

# Fibroids are composed of cells and extracellular matrix (ECM) proteins

Zannotti A, et al. (2021) *Cells*.

# A microphysiological system mimicking the uterine fibroid environment

# Primary human uterine fibroblasts are viable in our microphysiological system.

Live

Dead

Merge

Live Cells - Calcein-AM  
Dead Cells - Et-homodimer

# Screening Uterine Fibroblast Response to TGF-B3

# Holistic framework around precision medicine

- Recruiting patients with specific consideration for self-identified ancestry
- **Consideration of disease and who is burdened by that disease**
- Vendor availability allows us to investigate previously understudied associated dysfunction
- Question: WHO you study and WHY?
